## Write code locally, in your own space

Exercism is primarily built as a CLI-first tool. Download and submit exercises right from your terminal.

## Use the Exercism in-browser editor

Don't spend hours installing a language locally just to try it out. We support all 75 of our programming languages in our in-browser editor.

## Get automated analysis on your code

Not quite sure how well you've done? We run automatic analysis on your solutions to give you quick feedback and points of improvement.
